

'Healing Skin is what we do'

BioPad Collagen Dressing

OSWELL
PENDA
PHARMACEUTICAL

BIOPAD Collagen Dressing is comprised, exclusively of 100% type 1 heterologous equine collagen. Upon application it transforms into a soft gel allowing contact with the entire wound bed, accelerating the closure of hard-to-heal wounds. This innovative, sterile dressing is suitable for a variety of wound types and as a local haemostat.

Indications for use

- Pressure ulcers
- Mixed Aetiology ulcers
- Diabetic foot ulcers
- Chronic skin lesions
- Acute traumatic wounds
- Local haemostat
- Partial and full-thickness burns
- Donor sites and other bleeding surfaces
- Dehisced surgical incisions
- Post-laser surgery

**Accelerates
closure of
hard to heal
wounds**

'Healing Skin is what we do'

BioPad Collagen Dressing

Performance

BIOPAD Collagen acts as a mechanical support and catalyst to fibroblast migration, to encourage the growth of granulation tissue and provide the necessary scaffolding to natural skin regeneration. Type 1 equine collagen keeps its native structure, protects the wound bed from the outer environment, whilst creating a barrier against bacteria.

- Stimulates new granulation tissue and provides wound healing
- Prevents trauma to granulation tissue
- Controls minor bleeding
- Atraumatic, dissolves within the wound
- Acceleration of tissue recovery and a reduction of inflammation
- Easy to apply, can be cut to size

Protection

Forms a barrier, prevents bacteria entering wound bed

Stimulation

Restores formation of new granulation tissue

Bio-absorbable

Non-adherent, ease of application, patient compliant

Absorption

Acts as a local haemostat
